Index

O, 130
Ω, 133
Θ, 134
π, 70

abacus, 106
abstraction, **15**, 38, 44, 103
accumulate, 60
accumulators, 85
algorithm, **2**, 53
aliasing, 190, **190**
alphabet, **19**
Analytical Engine, 35, 124
any-uple, 81
Apollo Guidance Computer, 12
append, 89
application, 46
apply, 199
arguments, **42**
assignment, 179, **179**, 214
asymptotic operators, 130
authentication, 22
axiomatic system, **237**

Backus-Naur Form, 26
base case, **29**, **57**
begin, 180
belittle, 19, 22
best-first-sort, 153
bigger, 76
binary numbers, **8**
binary question, **4**
binary search, 168
binary tree, **5**, 161, 168
binomial expansion, 92
bit, **4**
Bletchley Park, 122
Boolean, 40, 75, 108
Boolean logic, **108**
brute force, **94**
busy beaver problem, 249

car, 77
cdr, 77
class, **200**, 226
coffee, 2
compiler, **38**
complete, **238**
compose, 55
composition, 54
computability, **237**
computable, 237, **241**
computer, **3**
computing machines, 106
cond, 198
conditional expression, 198
cons, 77
consistent, **238**
constant time, **140**
constructors, **200**
Corner the Queen, 72
countable, **9**
counter, 181, 196
counting, 106

data abstraction, **93**
datatype, **75**
debugging, **68**
defensive programming, **86**, 95
definition, 44, 180, 199
depth, **6**, **162**
derivation, **27**
diagonalization, **9**
dictionary, 218
digital abstraction, **110**
Digital Equipment Corporation, 208
discrete, 9
display, 68
divide-and-conquer, **54**
domain names, 29
DrRacket, 39
dynamic dispatch, **206**
dynamic programming, **129**

eager evaluation, **230**
Elements, 237
else, 198
encapsulation, 196, **196**
ENIAC, 207
Enigma, 122
Entscheidungsproblem, 122
environment, **182**
Epimenides paradox, 240
eq?, 95, 191
equal?, 155
evaluation, **40**

evaluation stack, 66
evaluator, **211**, 223
exponential, 147
expression, **40**
expt, 71

factorial, 58, **58**, 90
fcompose, 55
fibonacci, 127, 131
filtering, 88
flattening lists, 91
format, 95
Fortran, 26
frame, **182**
function, **40**
functional programming, 188

games, 71
global environment, 182
Goldbach's Conjecture, 242
grammar, **26**
growth rates, 139

halting problem, 241
higher-order procedure, **46**, **55**

immutable, **186**
imperative programming, 188, **188**
inc, 55
incompleteness, 240
indexed search, 169
information, **3**
information processes, **2**
inheritance, **196**
inherits, **202**
instance variables, **199**
interpreter, **38**, **211**
intractability, 147
intsto, 90
invoke, **200**

khipu, 106

lambda, 45
Lambda calculus, 122
language, **19**
lazy evaluation, 229, **230**
length, 84
let expression, 156
linearly, **140**
LISP, 39
list, **81**, 81–83
List (Python), 216
list procedures, 82
list-append, 89, 190
list-flatten, 91
list-get-element, 86
list-length, 84
list-map, 87
list-product, 84
list-reverse, 89
list-search, 168
list-sum, 84
logarithm, **5**
logarithmic growth, 160

machine code, 38
magnetic-core memory, 208
map, 87
mcons, 186
means of abstraction, 21, 37
means of combination, 20
measuring input size, 137
messages, 197
methods, **200**
Methods (Python), 219
MIT, ix, 207, 208
mlist, 187
mlist-append, 190
modulo, 61
morpheme, 20
mutable lists, 187
mutable pair, 186
mutators, **179**
